

**AMENDMENTS TO THE CLAIMS**

Claim 1: Canceled

Claim 2 (previously presented): The beating appliance for cheering as recited in claim 5, wherein an end member having a diametrically increased grip end is fitted to the other end of the minimum diameter tubular member.

Claim 3 (previously presented): The beating appliance for cheering as recited in claim 5, wherein the extended state is held by a fit between the projecting portion and the recessed portion.

Claim 4: Canceled

Claim 5 (previously presented): A beating appliance for cheering, comprising a body portion having a plurality of tubular members reduced in diameter from one end to another end in a longitudinal direction and combined with each other so as to be extended/retracted,

wherein the tubular members adjacent to each other are brought into an extended state by connecting an inner peripheral surface of a large diameter tubular member to an outer peripheral surface of a small diameter tubular member in taper-stacked states, and brought into a retracted state by storing the small diameter tubular member in order in a nested state into the large diameter tubular member;

wherein the inner and outer peripheral surfaces of the tubular members have either a projecting portion or a complementary recessed portion that fit to hold the beating appliance in the extended state;

wherein each tubular member is a different shape;

wherein a head cap is fitted to one end of a maximum diameter tubular member;

wherein the retracted state of the body portion is held by locking one end of a minimum diameter tubular member by the head cap; and

wherein the head cap has a locking projecting portion projecting to the body portion, and the locking projecting portion and the minimum diameter tubular member are locked by screw-fitting the locking projecting portion to one end of the minimum diameter tubular member.

Claim 6: Canceled

Claim 7 (previously presented): A beating appliance for cheering composed by coupling two beating appliances for cheering through a string,

each beating appliance for cheering, comprising a body portion having a plurality of tubular members reduced in diameter from one end to another end in a longitudinal direction and combined with each other so as to be extended/retracted,

wherein the tubular members adjacent to each other are brought into an extended state by connecting an inner peripheral surface of a large diameter tubular member to an outer peripheral surface of a small diameter tubular member in taper-stacked states, and brought into a retracted state by storing the small diameter tubular member in order in a nested state into the large diameter tubular member.

Claim 8 (previously presented): The beating appliance for cheering as recited in claim 5, wherein an end member having a diametrically increased grip end is fitted to the other end of the minimum diameter tubular member, and

the extended state is held by a fit between the projecting portion and the recessed portion.

Claim 9-14: Canceled

Claim 15 (previously presented): The beating appliance for cheering as recited in claim 5, wherein an end member having a diametrically increased grip end is fitted to the other end of the minimum diameter tubular member,

wherein the retracted state is held by putting an end cap from the other end side in the retracted state of the body portion and locking the end cap to the maximum diameter tubular member.

Claims 16-17: Canceled

Claim 18 (previously presented): A beating appliance for cheering composed by coupling two beating appliances for cheering as recited in claim 2 through a string.

Claim 19 (previously presented): A beating appliance for cheering composed by coupling two beating appliances for cheering as recited in claim 3 through a string.

Claim 20 (previously presented): A beating appliance for cheering composed by coupling two beating appliances for cheering as recited in claim 8 through a string.
